

Features Used in Excel

Using the Vrinda Store dataset, several Excel features were used to analyze sales data and build an interactive dashboard.

1. PivotTables

What is a PivotTable?

A PivotTable is an Excel feature used to summarize large amounts of data quickly.

Instead of checking thousands of rows manually, PivotTables automatically calculate totals, counts, and summaries.

Why PivotTables Were Used

The dataset had:

- Customer data
- Sales amounts
- States
- Channels
- Product categories
- Order status

PivotTables helped organize and analyze this data easily.

PivotTables Created in the Project

Orders vs Sales

Compared:

- Total sales amount
- Total number of orders

Purpose

Understand:

- Which months had highest sales

- Which months had highest orders
-

Men vs Women Analysis

Compared:

- Sales made by men
- Sales made by women

Purpose

Identify which gender purchased more.

Insight

Women contributed more sales.

Order Status Analysis

Analyzed:

- Delivered orders
- Cancelled orders
- Returned orders
- Refunded orders

Purpose

Understand order performance.

Top 5 States Analysis

Compared sales by different states.

Purpose

Identify top-performing states.

Example

States like:

- Maharashtra
- Karnataka

- Telangana

generated high sales.

Age vs Gender Analysis

Compared:

- Teenagers
- Adults
- Seniors

with:

- Men
- Women

Purpose

Understand which age group purchased most.

Channel Analysis

Compared sales from:

- Amazon
- Myntra
- Flipkart
- Ajio
- Meesho

Purpose

Find best-performing sales channel.

2. PivotCharts

What are PivotCharts?

PivotCharts are charts connected to PivotTables.

They automatically update when PivotTable data changes.

Why PivotCharts Were Used

Charts make data easy to understand visually.

Instead of reading numbers, users can quickly understand trends through graphs.

Types of Charts Used

Combo Chart

Used For

Orders vs Sales comparison.

Purpose

Shows:

- Sales trend
- Order trend

together in one chart.

Benefit

Easy monthly comparison.

Pie Chart

Used For

- Men vs Women sales
- Order status
- Channel contribution

Purpose

Shows percentage contribution.

Example

Women contributed larger sales percentage.

Bar Chart

Used For

Top 5 States analysis.

Purpose

Compares states easily.

Benefit

Quickly identifies highest-selling states.

Column Chart

Used For

Age vs Gender analysis.

Purpose

Compares categories visually.

3. Dashboard

What is a Dashboard?

A dashboard is a single screen containing:

- Charts
- PivotTables
- Filters
- Insights

all together.

Why Dashboard Was Created

Businesses need quick summaries instead of checking raw data.

Dashboard helps managers:

- Understand sales quickly
- Track performance

- Make decisions
-

Dashboard Features Used

Interactive Charts

Charts update automatically when filters are used.

Proper Formatting

- Titles added
- Colors formatted
- Layout aligned properly

Gridline Removal

Made dashboard clean and professional.

4. Slicers

What are Slicers?

Slicers are clickable filter buttons.

Why Slicers Were Used

To make dashboard interactive and user-friendly.

Instead of using normal filters, users can click buttons.

Slicers Added

Month Slicer

Filters dashboard by month.

Channel Slicer

Filters dashboard by:

- Amazon
- Myntra

- Flipkart
etc.

Category Slicer

Filters products like:

- Kurta
 - Saree
 - Set
-

Benefit of Slicers

Dashboard updates instantly after clicking.

Example:

Click:

Amazon

All charts show Amazon sales only.

5. Monthly Analysis

What Was Analyzed

Sales performance month by month.

How It Was Done

Created Month column using:

=TEXT(G2,"mmm")

Then used Month in PivotTables and charts.

Purpose

Identify:

- Best sales month
- Lowest sales month
- Sales trends

6. Gender Analysis

What Was Analyzed

Compared purchases made by:

- Men
- Women

Purpose

Understand customer behavior.

Insight

Women customers contributed more sales.

7. State Analysis

What Was Analyzed

Compared sales across different states.

Purpose

Identify top-performing locations.

Benefit

Helps business focus marketing on strong regions.

8. Channel Analysis

What Was Analyzed

Compared sales platforms:

- Amazon
- Myntra
- Flipkart
- Ajio

- Meesho

Purpose

Identify which platform generated highest revenue.

Insight

Myntra and Amazon contributed major sales.

9. Sales Insights

What are Sales Insights?

Important conclusions generated from analysis.

Insights Found

Women Purchased More

Women customers generated higher sales.

Adults Were Main Buyers

Adult age group contributed maximum orders.

Delivered Orders Were Highest

Most orders were successfully delivered.

Certain States Generated High Revenue

Some states contributed more sales than others.

Myntra and Amazon Were Top Channels

These platforms generated highest revenue.

Final Project Outcome

Using all these Excel features, the project created:

- Interactive dashboard
- Business sales report
- Customer behavior analysis
- Monthly sales tracking
- State-wise performance analysis
- Channel-wise performance analysis

The dashboard helps businesses make better decisions using data.
