

1. Data Collection

The first step in the project was collecting and importing the Vrinda Store sales dataset into Microsoft Excel.

What the Dataset Contained

The dataset included:

- Order details
- Customer information
- Product categories
- Sales amount
- Order status
- Sales channels
- Shipping details

Important Columns Used

- Order ID
- Customer ID
- Gender
- Age
- Date
- Status
- Channel
- Category
- Amount
- State

Purpose of Data Collection

The main goal was to gather all sales information in one place for:

- Sales analysis
- Customer behavior analysis
- Dashboard creation

- Business insights

What Was Done

- Opened dataset in Excel
- Verified all rows and columns
- Checked whether data was properly imported
- Ensured records were complete and readable

Benefit

This step helped prepare the data for creating the dashboard and doing sales analysis.
