

2. Data Cleaning

Data cleaning was done to make the dataset accurate, organized, and ready for analysis.

What Was Done

- Checked for blank/null values
- Removed duplicate records
- Corrected inconsistent values
- Verified data types
- Standardized text values

Features Used

Used Excel Filter option:

Data → Filter

Used Find & Replace:

Ctrl + F → Replace

Examples

- M → Men
- W → Women
- One → 1
- Two → 2

Purpose

This step helped make the data clean and reliable for creating PivotTables, charts, and dashboard analysis.
