

Tools Used in the Excel Project

This project used different features and tools of Microsoft Excel to clean data, analyze sales, and create an interactive dashboard.

1. Microsoft Excel

What is Excel?

Excel is a spreadsheet software used for:

- Storing data
 - Calculations
 - Analysis
 - Charts
 - Dashboards
-

Why Excel Was Used

The entire project was created in Excel because it helps:

- Handle large datasets
 - Analyze sales data
 - Create reports visually
-

2. Filters

What is Filter?

Filter adds dropdown arrows beside column names.

Location

Data → Filter

Short-cut

Ctrl + shift+L

Why It Was Used

Used to:

- Find blank values
-

3. Formulas

What are Formulas?

Formulas perform calculations automatically.

Formulas Used

IF Formula

=IF(E2>=50,"Senior",IF(E2>=30,"Adult","Teenager"))

Purpose

Created Age Groups:

- Teenager
 - Adult
 - Senior
-

TEXT Formula

=TEXT(G2,"mmm")

Purpose

Extracted month names from dates.

Example

- Jan
 - Feb
 - Mar
-

4. PivotTables

What is a PivotTable?

A PivotTable summarizes large data quickly.

Why It Was Used

Dataset had thousands of records.

PivotTables helped analyze:

- Sales
- Orders
- Gender
- States
- Channels

PivotTables Created

Orders vs Sales

Compared:

- Total orders
- Total sales

Gender Analysis

Compared:

- Men sales
- Women sales

Order Status Analysis

Checked:

- Delivered
 - Cancelled
 - Returned
 - Refunded
-

State Analysis

Identified top-performing states.

Channel Analysis

Compared:

- Amazon
 - Myntra
 - Flipkart
 - Ajio
-

5. PivotCharts

What are PivotCharts?

Charts connected to PivotTables.

Why They Were Used

Charts make data easy to understand visually.

Charts Used

Combo Chart

Compared:

- Orders
 - Sales
-

Pie Chart

Used for:

- Gender analysis
- Order status
- Channel contribution

Bar Chart

Used for:

- Top states

Column Chart

Used for:

- Age vs Gender analysis

6. Slicers

What are Slicers?

Slicers are clickable filter buttons.

Why Slicers Were Used

Made dashboard interactive.

Users can filter dashboard instantly.

Slicers Added

- Month
- Channel
- Category

Example

Click:

Amazon

Dashboard updates automatically.

7. Dashboard

What is a Dashboard?

A dashboard combines:

- Charts
- PivotTables
- Filters
- Insights

into one screen.

Why Dashboard Was Created

To make sales analysis easy for businesses.

Managers can quickly understand:

- Sales performance
 - Customer behavior
 - Monthly trends
-

8. Sorting

What is Sorting?

Sorting arranges data in order.

Types Used

- A to Z
 - Largest to Smallest
 - Smallest to Largest
-

Purpose

Helps identify:

- Highest sales
- Lowest sales

- Important records
-

9. Find & Replace

What is Find & Replace?

Used to change values quickly.

Shortcut

Ctrl + F → Replace

Why It Was Used

To standardize data.

Example

- M → Men
 - W → Women
 - One → 1
-

10. Conditional Formatting

What is Conditional Formatting?

Highlights important data automatically.

Why It Was Used

To:

- Find duplicates
 - Detect errors
 - Highlight important values
-

11. Data Cleaning

What is Data Cleaning?

Process of correcting incorrect data.

Cleaning Steps Performed

- Removed blanks
- Fixed inconsistent values
- Corrected text
- Checked duplicates

Purpose

Improves data accuracy.

12. AutoFill

What is AutoFill?

Automatically copies formulas down rows.

Why It Was Used

Saved time while applying formulas.

Example

Copied Age Group formula to all rows.

13. Refresh All

What is Refresh All?

Updates PivotTables and dashboard.

Location

Data → Refresh All

Why It Was Used

Ensures charts and reports show latest data.

14. Excel File Formats

Formats Used

Recommended

.xlsb

or

.xlsm

Why These Formats Were Used

They preserve:

- PivotTables
 - Slicers
 - Charts
 - Dashboard formatting
-

Final Outcome

Using these Excel tools, the project successfully created:

- Interactive dashboard
- Sales analysis report
- Customer insights
- State analysis
- Channel analysis
- Monthly sales trends

The project helps businesses make data-driven decisions easily.
